

Did you know that adding and removing heat could change materials?

For example, what do you think would happen if I added heat to ice?

You can add heat to things in an oven.

You can remove heat from things in a freezer.

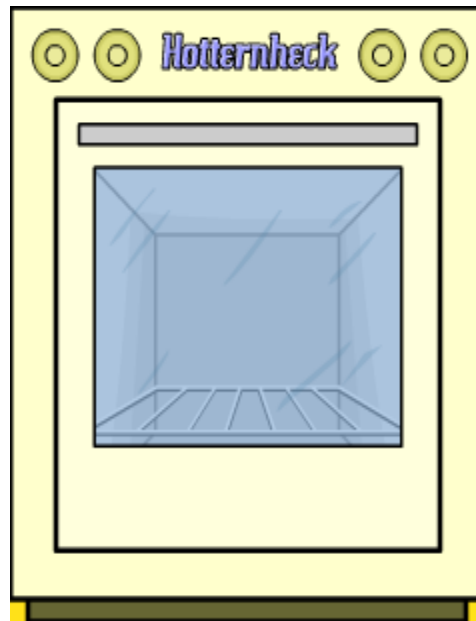

CHANGE IT!

Drag the different solid and liquid objects into the oven and freezer to see what happens.

Turn the oven on.

Did you know that you can change the physical properties of objects?

Scissors

Scissors can cut things.

Hands

Hands can fold things.

Sandpaper

Sandpaper make rough surfaces smooth by rubbing away layers.

Before

After

1. Get five sheets of paper and two hands. (your hands)
2. Demonstrate that hands can change the shape of an object by bending each piece of paper in to a different shape.
3. Draw your designs in the boxes below.

1. Get five sheets of paper and one pair of scissors.
2. Demonstrate that scissors can change the shape of an object by cutting each piece of paper in to a different shape.
3. Draw your designs in the boxes below.

It's getting hot in here.

Put the pictures in order based on what would happen to each item if heat was added to them.
